

StormGeo integrates electronic logbook into s-Suite solution

Tuesday, 13 June 2023 | [Navigation, Autonomy & New Technologies](#)

StormGeo, a provider of weather intelligence and decision-support solutions, in partnership with Anschütz, a manufacturer of navigation and bridge systems, has announced the integration of Anschütz's electronic logbook with StormGeo's shipping solution, s-Suite.

The aim of this integration is to support ship operators, managers, and owners in staying compliant, reducing manual work, and maintaining a more accurate and precise logbook.

The data will move from the official electronic logbook to s-Insight | Log, a part of StormGeo's s-Suite, creating one system for ship-to-shore communication and fleet performance analysis, that complies with EU-MRV regulations.

Espen Martinsen, Executive Vice President of Sales at StormGeo, said: "The electronic logbook, together with s-Insight | Log, creates a new optimised workflow for the ship crew, providing reliable data that helps them stay compliant and minimise reporting burden."

Volker Wenzel, Technical Marketing Manager at Anschütz, said: "Even though digitalisation is a buzzword in the shipping industry, many vessels still use paper logbooks. Paper logbooks commonly come with issues such as manual entry errors, illegible handwriting, and misplaced logs. Adopting the electronic logbook reduces these errors by providing structured data entry fields, validation checks, and data consistency measures."
